#### **DETAILED ACTION**

### Specification

- 1. The disclosure is objected to because of the following informalities: On page 8 lines 6-8 the specification states, "A nut 24 serves to attach the arrangement, which nut on the one hand fixedly secures the spherical head 22 in the adjusting body 18a and on the other hand fixedly secures the two disks 6,8 in the plate 4". The examiner recommends changing the lines to read as follows, "A nut 24 is used to attach the arrangement by fixedly securing the spherical head 22 in the adjusting body 18a and by fixedly securing the two disks 6,8 in the plate 4." Appropriate correction is required.
- 2. The abstract of the disclosure is objected to because the final line of the abstract contains a reference number. The examiner recommends removing the reference number from the abstract. Correction is required. See MPEP § 608.01(b).

#### Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

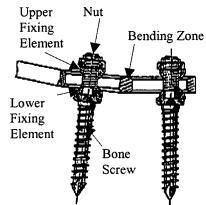

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1-3 and 9-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Alby (WO 95 27444 A).

Regarding claim 1, Alby shows a device, see Figure 1 below, comprising a bone screw, a plate arrangement, and upper and lower fixation elements. The plate includes at least one opening in which the bone screw is displaceable. The fixation elements

Art Unit: 3733

comprise an eccentric bore through which the bone screw can pass through. The bone screw is capable of being movable around its longitudinal axis at a point above the shaft. Regarding claim 2, Alby shows a device wherein the plate has a ring along the inner wall of the opening. Regarding claim 3, Alby shows a device in which the upper and lower fixation elements are circular in shape. Regarding claim 9, Alby shows a device where the bone screw is an adjusting screw, and that the upper portion of the screw has a thread that can be attached to the device with a nut. Regarding claims 10 and 11, Alby shows a system of devices comprising plate arrangements, bone screws, and fixation elements as shown in Figure 1 (claim 10). The multiple devices are connected together by bending zones as shown in Figure 1 below (claim 11).

Figure 1

## Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 3733

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

6. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Alby (WO 95 27444 A).

Alby discloses the claimed invention except for the lower fixation element is thicker than the upper fixation element. It would have been an obvious matter of design choice to make the lower fixation element thicker than the upper fixation member, since such a modification would have involved a mere change in the size of a component. A change in size is generally recognized as being within the level of ordinary skill in the art. In re Rose, 105 USPQ 237 (CCPA 1955).

7. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Alby (WO 95 27444 A).

Alby discloses the claimed invention except for the hole in the lower fixation element has a conical shape. It would have been an obvious matter of design choice to one skilled in the art at the time the invention was made to construct the hole in the lower fixation element of Alby with a conical shape, since applicant has not disclosed that such solve any stated problem or is anything more than one of numerous shapes or configurations a person ordinary skill in the art would find obvious for the purpose of providing a forming edge in the heating portion or clamp. In re Dailey and Eilers, 149 USPQ 47 (1966).

Art Unit: 3733

## Allowable Subject Matter

8. Claims 6-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892 for cited references the examiner felt were relevant to the application.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nicholas Woodall whose telephone number is 571-272-5204. The examiner can normally be reached on Monday to Friday 8:00 to 5:30 EST...

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eduardo Robert can be reached on 571-272-4719. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
